

Embodying Values

Modules:	<i>Protecting the Environment</i>
Topic:	<i>Embodying values</i>
Title:	<i>Learn about tragedy of the commons</i>
Target group:	<i>Students 11 – 18 years old</i>
Starting Point:	<i>As the world population increases, the rate of depletion or destruction of common resources increases, since nature cannot cope with their replenishment or is unable to do so.</i>
Aim:	<i>Students will be able to recognize the problem of depleting common resources and be able to inform others. They'd also familiarise themselves with good practices for their everyday lives.</i>
Implementation:	<i>This activity will be in two parts. The first part will be informative for the students by the teacher. The second part will give the opportunity to the students to present what they learnt.</i>
Estimated Duration:	<i>135 minutes</i>

More detailed content and instructions:

1. The teacher will introduce the common resources presented in the training material along with some general information about them, how they are used etc.
2. The teacher will divide students into 9 small groups, one for each common resource.
3. Each group will research the resource assigned to them using digital media and after that they will create a brief presentation with information about the depletion of each common resource, the reason behind it and some good practices for every day.
4. Each group will give a short (about 10 minutes) presentation of the above to the rest of the classroom.

Working in this manner, would be beneficial for the whole classroom, since all of the students will be able to learn about all the common resources described in BeWEEN training material and their use.
